Anima e automa

# Fig. 1. Odradek

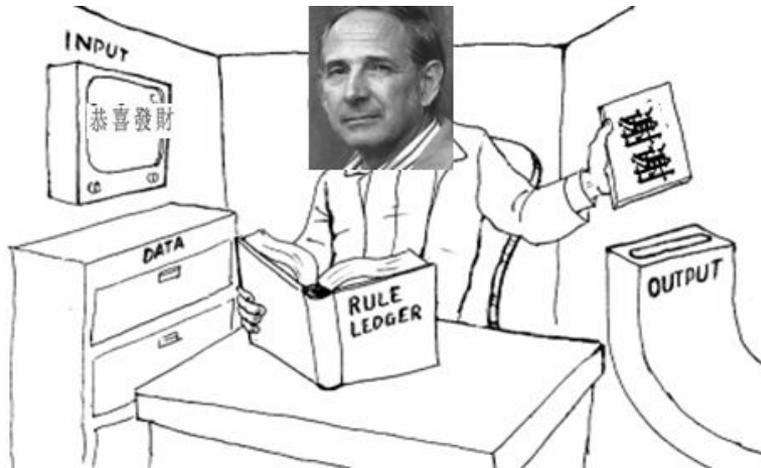

Mi chiedo inutilmente cosa avverrà di lui. Forse che può morire? Tutto ciò che muore ha avuto prima una specie di scopo, una specie di attività sulla quale si è logorato; questo non è il caso di Odradek. Forse dovrà allora un giorno rotolare ancora per le scale trascinando i suoi fili arrotolati fra i piedi dei miei figli, e dei figli dei miei figli? Certo, non fa danno a nessuno; ma questa idea, che possa anche sopravvivermi, mi dà quasi un dolore.”

### Farewell to the EU, as British Leader Signs Letter to Trigger Exit

SPECIAL DELIVERY: Prime Minister Theresa May, sitting in front of a painting of Britain's first prime minister, Robert Walpole, signs a letter to be delivered Wednesday signaling the U.K.'s intention to leave the European Union. This opens a two-year negotiating window with the bloc.

### Trump Loosens Climate Rules

President says rollback of Obama's agenda will save coal jobs, but now utilities focus on gas

By LOUISE RADOMSKY  
Ann CASSABURA SWEET

WASHINGTON—President Donald Trump Tuesday took steps to begin unraveling the centerpiece of the Obama environmental agenda, signing an order to reverse rules aimed at pushing U.S. utilities to shift from coal plants to cleaner-burning fuels.

"My administration is putting an end to the war on coal," Mr. Trump said ahead of the official signing at the Environmental Protection Agency, repeating a campaign slogan he used to champion policies he said would bring back mining jobs.

He said he was paring back regulations that impeded job creation, while still ensuring clean air and water.

But while the moves are being billed as job savers, companies and energy experts said the order is unlikely to reverse the U.S. utility industry's shift to natural gas, solar and wind as leading sources of electricity.

The order begins a formal review of President Barack Obama's Clean Power Plan, which would have required utilities to reduce carbon emissions.

### BlackRock Shake-Up Favors Computers Over Humans

By SARAH KRONE

BlackRock Inc. has started a shake-up of its stock-picking business, relying more on robots rather than humans to make decisions on what to buy and sell.

The firm has become the world's largest asset manager, with \$5.1 trillion in total assets, in large part because of its dominant position in low-cost,

passive investment such as exchange-traded funds.

But its stock-picking unit—which depends on money managers to choose investments—has lagged behind rivals in performance, and clients have been withdrawing their money.

The company has taken the view that it is difficult for human beings to beat the market with traditional bets on large U.S. stocks. So the firm on

Tuesday announced an overhaul of its actively managed equities business that will include job losses, pricing changes and a greater emphasis on computer models that inform investments. Seven stock portfolio managers are among several dozen employees who are expected to leave the firm as part of the revamp, a person familiar with the matter said.

The firm is offering its Main

Street customers lower-cost quantitative stock funds that rely on data and computer systems to make predictions, an investment option previously available only to large institutional investors. Some existing funds will merge, get new investment mandates or close.

The changes are the most significant attempt yet to rejuvenate a unit that has long

### GM Feels New Activist Pressure

Investor David Einhorn is pressing General Motors Co. to create two classes of common stock, citing its lagging performance. B1
